GitHub | LinkedIn

## Professional Summary

Data analyst with Python, SQL and sports-analytics experience: football match-event tagging at Hudl India, an XGBoost match-outcome pipeline, and player-tracking data extracted from broadcast footage with computer vision.

## Technical Skills

**Analytics**: Python (Pandas, NumPy), SQL (PostgreSQL, SQLite), Power BI, Tableau, Streamlit, scikit-learn, XGBoost
**Data Engineering**: Web scraping and ETL pipelines, FastAPI, Flask, REST APIs
**Computer Vision**: YOLOv8, OpenCV, object tracking

## Professional Experience

**Hudl India** Mumbai, India
*Wyscout Analyst* *Aug 2026 – Oct 2026*

- Tagged and quality-checked football match events in Wyscout's platform against its event-definition rules.

**Talent Corner HR Services Private Limited** Mumbai, India
*Software Engineering Intern* *Dec 2025 – Feb 2026*

- Extended **PostgreSQL** schemas with new columns for dashboard user tracking, in a database of **60,000+** professional profiles.
- Built Flask REST APIs connecting a Python AI document generator to a React/Node.js frontend.
- Load-tested the APIs with Postman.

## Data & Analytics Projects

**Football Any-latics: Match Outcome Prediction Pipeline** | *Python, XGBoost, SQLite, Streamlit*

- Built an automated pipeline: fixture scraper → SQLite → feature engineering (rolling goal difference, home/away advantage, head-to-head) → **XGBoost** model outputting home/draw/away probabilities.
- Built a Streamlit dashboard with probability gauges and team-form comparison.

**Sports Analyser: Football Tracking Data from Broadcast Video** [GitHub] | *YOLOv8, OpenCV, Python*

- Fine-tuned **YOLOv8** on a custom soccer dataset: **84.4%** mAP@50 on the validation split (92.0% on players).
- Projected player foot positions onto a 105 m × 68 m pitch model with homography and computed sprint speeds in km/h; fixed a frame-skip time-delta bug that had inflated speeds past 65 km/h (now max 36 km/h).
- Exported match events and player kinematics to CSV and JSON for analysis.

**PokéArchitect: Battle Analytics App** | *React, FastAPI, PostgreSQL, Power BI*

- Stored 1,000+ Pokémon species in PostgreSQL and built analytics for type-coverage matrices, speed tiers and team synergy scores, exposed through 30+ REST endpoints.
- Built a Power BI dashboard on the same dataset; app deployed on Render.

## Education

**Nagandas Khandwala College** Mumbai, Maharashtra
*B.Sc. Computer Science (Spl. in Artificial Intelligence & Machine Learning)* *2023 – 2026*

## Certifications

**Cloud Engineering:** AWS Data Engineering for Generative AI Applications, AWS Connecting Systems and Machines for Industrial Manufacturing, Microsoft Azure Cloud Computing (SDP)
**Data & ML:** ExcelR Data Analytics (in progress), DeepLearning.AI Machine Learning Specialization, TensorFlow Developer Certificate
